

# Zebra® GK420™ Healthcare Desktop Printer

**Designed for Healthcare. Constructed with Disinfectant-ready Plastics. Engineered to Print Anywhere.**

## PROTECT PATIENT SAFETY

Zebra's GK420 Healthcare desktop printer is specifically designed to meet the needs of healthcare professionals. Staff must maintain a clean environment and keep all tools that come into contact with patients free of germs, blood or other infectious liquids to safeguard patient health. And, cleaners can be harsh. That's why our healthcare printers, including the GK420 Healthcare, are constructed using durable, disinfectant-ready materials to ensure they can withstand regular cleaning over their lifetime.

## REDUCE THE RISK OF ERRORS AND MEET INDUSTRY STANDARDS

The misidentification of medications and samples causes tens of thousands of adverse events each year—in the United States alone. GK420 Healthcare printers enable doctors and clinicians to positively identify medications and samples using industry-compliant barcode labels, which drastically reduces the risk of errors.

## PRINT LABELS ANYWHERE WITHIN A HEALTHCARE FACILITY

Healthcare facilities have specific requirements for electronic devices to avoid critical equipment interference. Zebra designed the GK420 Healthcare printer with a medical-grade power supply that meets IEC 60601-1 standards. Now, healthcare professionals can print labels anywhere in a healthcare facility—without the risk of conflict. This makes the GK420 Healthcare printer ideal for a number of applications throughout your facility, including medication identification in the pharmacy, sample processing in the lab and tissue identification in the surgery center.

## CONSERVE RESOURCES AND MAXIMIZE PERFORMANCE

Built with Zebra durability and reliability, the GK420 Healthcare is the latest addition to our growing healthcare solutions portfolio of hardware, software, services and supplies. Like all G-Series™ desktop printers, the GK420 Healthcare is ENERGY STAR® qualified to reduce operational costs. Easy to use, it boasts the smallest footprint of any 4-inch desktop printer and the easiest ribbon-loading system available. It also features thermal transfer and direct thermal printing at 203 dpi.

## INTEGRATE WITH EASE

With connectivity options including USB, Serial and Parallel or USB and Ethernet, this printer is easy to integrate into existing local or networked systems. Native EPL and ZPL® programming languages ensure the GK420 Healthcare fits in perfectly with other Zebra printers.

## GAIN PEACE OF MIND

Many of Zebra's healthcare solutions, including the GK420 Healthcare, are certified and recommended by all of the leading Electronic Health Records (EHR) providers. Ideal for labeling patient specimens, medications and medical records, Zebra's GK420 Healthcare printers help clinicians safeguard patient health and ensure compliance.
